

Application No. 09/683,238

**Amendments to the Specification:**

1. Please **replace** paragraph **following [178]** with the following amended paragraph:

Personalities may be alternatively developed using predefined service tags. In this alternate embodiment, the personality tag 502 represents a service and not a personality. In this embodiment, users capture a collection of one or more document service requests 106 that are stored in a service tag 502 using for example tag reader 506. Using the captured collection, the user defines a personality with it. This personality can then be attached to a document for enrichment in accordance therewith. Unlike personality tags, document service tags can be much more specific. In one embodiment shown in Figure 2, a hardcopy newspaper 230 includes a service tag 232 that identifies a service that will enrich a document in accordance with the content from the newspaper of the service tag attached thereto.

2. Please **replace** paragraph **following [193]** with the following amended paragraph:

If the insertion point is selected to occur after the document is rendered to postscript, the postscript driver is alerted to create a copy of the document before sending it to the selected printer. Subsequently, a personality [[to]] attached to the rendered postscript document. Both the postscript document and its attached personality are stored on the meta-document server 200 for enrichment to take place. If either the name of the document, and/or the identifier of the user who submitted the document to the device are available to the device driver, then the location of the personality-enriched document is communicated to the user via some notification service (e.g., email, smart cover sheet, etc.). Smart coversheets are disclosed in U.S. Patent Application No. 09/746,913, which is incorporated herein by reference.
